

The materials also have other properties relating to caring for nature.

- There are **polluting** materials, such as tyre rubber, that if burned will pollute the air.

- There are **recyclable** materials, such as plastic, paper or glass, which when worn or broken can be used to make new objects.

- There are **reusable** materials, such as cotton or the wool of an antique garment, which we can use to disguise ourselves.

- There are **renewable** materials, such as wood, that we can get back naturally when new trees grow.

- There are **biodegradable** materials, such as wood and paper, that nature alone is capable of transforming into another material.
