

Complete the name of the organs involved in the respiratory system.

Match each organ with its corresponding function.

Pharynx	Connect the pharynx to the trachea.
Bronchi	They humidify and clean the air we breathe.
Lungs	There are two of them and they house the bronchi, bronchioles and pulmonary alveoli.
Nostrils	It carries air from the nose to the larynx and trachea, humidifying and warming it.
Larynx	It carries air to the lungs.
Pulmonary alveoli	Trachea branches are branches of the windpipe that enter the lungs, carrying air deep into the lungs.
Trachea	They are the exact places where carbon dioxide is exchanged for oxygen.
