

In our body everything works interconnected and is related, it is a system. For example, food is digested by the digestive system, which provides energy to the whole body. The excretory system discards what we do not need, which comes largely from digested food.

Let's look for more connections that occur in our body. To do this, **complete the missing letters of the words in the following phrases.**

Thanks to the **R _ _ P I _ _ _ _ R _** system, we inhale air from the **A _ _ _ _ P H _ R _**, which will reach all of the **C _ L _ _** of our body thanks to the **_ I R _ _ L A _ _ _ Y** system.

Forests are the green **L _ _ G _** of the **P L _ N E _** and thanks to them we can breathe the **O X Y _ _ _** that we need to **L _ V _ _**.

Blood without oxygen is transported by the **V _ I _ S** of the **C _ _ C U _ _ T _ R _** system and all the CO₂ will be exhaled by the **_ E _ _ _ _ _ T O R _** system into the atmosphere.

O R G _ _ _ C and **L O _ _ L** farming produces vegetables without using poison and without polluting the air.

Healthy **F _ _ D** makes the whole **B _ D _** work properly, and provides **E _ _ R G _** to all the **O R G _ _ _** and cells of the body.

Saving **W A _ _ _** at home and by reducing our unnecessary **_ _ _ S U M P _ _ _ _** is important for maintaining the life of the **_ L A N _ _** and that of all living beings.

Fold along the dotted line and if you can't form any of the words you're looking for, here are some that can give you the clue:

ORGANS, DIGESTIVE, ATMOSPHERE, PLANET, CIRCULATORY, LUNGS, OXYGEN, LIVE, VEINS, ORGANIC, LOCAL, FOOD, BODY, ENERGY, RESPIRATORY, WATER, CONSUMPTION, CELLS, EXCRETOR, AIR
